PROFESSIONAL SUMMARY

Detail-oriented Full Stack Web Developer with 6+ years of experience engineering, deploying, and maintaining mission-critical, database-driven information systems for government initiatives. Specialized in Object-Oriented Programming (OOP) and modern full-stack architectures utilizing PHP (Laravel), Python (Django 6), Vue 3, React 19, Inertia.js v2, and MySQL. Proven track record of translating complex operational, financial, and institutional workflows into high-concurrency, auditable digital platforms while leveraging AI-assisted development and prompt engineering to accelerate end-to-end software delivery, database administration, and user onboarding.

CORE COMPETENCIES & TECHNICAL SKILLS

Backend: PHP 8.2+, Laravel (v10 / v12), Python 3.12, Django 6, RESTful APIs, Queued Workflows, Laravel Sanctum, Pest, PHP bcmath

Frontend: Vue 3, React 19, Inertia.js v2, TypeScript, Tailwind CSS, Unfold, Vite, Axios, Chart.js

Database & Data: MySQL, Pandas, Matplotlib, ReportLab, Schema Design, Concurrency Control (Pessimistic Locking), Query Optimization

Architecture, AI & Ops: Object-Oriented Programming (OOP), AI-Assisted Development, Prompt Engineering, Role-Based Access Control (RBAC), Polymorphic Audit Trails, Google Sheets API

KEY ENGINEERING PROJECTS

Enterprise Operations & Analytics System — Full-Stack Analytics & Reporting Platform

Stack: Python 3.12, Django 6, Tailwind CSS / Unfold, Pandas, Matplotlib, ReportLab

- Engineered a full-stack enterprise analytics and reporting system featuring longitudinal Year-to-Date (YTD) utilization tracking and executive dashboards.
- Developed cross-tabulated workforce compliance matrices using Pandas and automated visual diagnostics powered by Matplotlib.
- Built audit-ready document generation and reporting export pipelines supporting both PDF (ReportLab) and Excel formats.

IT Ticketing Management System — Full-Stack Operational Workflow Platform

Stack: Laravel 12, PHP 8.2, Vue 3, Inertia.js v2, Pest, MySQL, Tailwind CSS, Chart.js, Google Sheets API

- Engineered a centralized operational workflow system featuring a public request portal and a role-based internal administrative dashboard.
- Architected real-time SLA and turnaround time (TAT) tracking mechanisms with closed-loop threaded notifications for issue resolution.
- Built an automated third-party compliance auditing pipeline via Google Sheets API synchronization and interactive analytics with Chart.js.
- Guaranteed regression-free feature deployment and endpoint reliability through automated test coverage using Pest.

Procurement Management System — Financial Governance & Requisition Platform

Stack: Laravel 12, React 19, Inertia.js v2, TypeScript, Tailwind CSS, MySQL, PHP bcmath

- Developed an enterprise financial governance platform supporting multi-tier requisition workflows and approval pipelines.
- Implemented zero-drift fiscal and budget utilization tracking utilizing PHP `bcmath` for exact-precision arithmetic calculations.
- Secured financial ledger consistency against race conditions during peak submission windows using concurrency-safe pessimistic locking.
- Constructed HIPAA-aligned polymorphic audit logging across state changes, milestone approvals, and administrative actions.

DOST Multimedia Collection (DMC) System — Enterprise Asset & Publishing Repository

Stack: Laravel 12, Vue 3, Inertia.js v2, MySQL, Tailwind CSS, Laravel Sanctum, Pest, Chart.js

- Architected a role-based digital asset repository with multi-tier RBAC workflows (Author, Reviewer, Publisher) and gate validation.
- Engineered transactional bulk media upload and processing pipelines to reliably ingest high-resolution event media.
- Implemented detailed administrative audit logging to record rights updates, editorial revisions, and publishing status changes.
- Built a public search and discovery interface accompanied by real-time visualization dashboards monitoring media reach.

WORK EXPERIENCE

Computer Programmer II — DOST-STII — Mar 2021 – Present

- Analyze, design, and implement web-based information systems using object-oriented design patterns and relational database architectures across institutional agency programs.
- Direct database administration, system customization, staging deployments, and ongoing production maintenance while utilizing AI-assisted workflows and prompt engineering for rapid prototyping, code refactoring, and debugging.
- Conduct structured end-user onboarding, technical staff trainings, and Tier-2/3 software troubleshooting support.

Project Assistant II — DOST-MIMAROPA — Jan 2020 – Feb 2021

- Supported the regional rollout and hardware distribution of RxBox diagnostic telehealth units to rural health units (RHUs).
- Liaised between Regional Management Teams (RMT) and local medical personnel, providing operational secretariat and reporting support.

Computer Maintenance Technologist I / Operator IV — DOST-STII — Jul 2018 – Feb 2021

- Built and launched an internal Knowledge Management System for documentation retention and institutional retrieval.
- Delivered technical hardware/software support and assisted in database maintenance across department divisions.

EDUCATION

Bachelor of Science in Computer Science — De La Salle University - Dasmariñas — 2014 – 2018
